Title	Homework #19
Due	Jun 4, 2021 11:55 PM
Grade Scale	No Grade

Instructions

The UNIX "Fork" command has been a critical aspect of network programming over the years. I would like you to write a (roughly) one page summary of what the function does and what activities you'd expect to see in the operating system after calling this function from a program. Please pay careful attention to the various states that a process goes through and explain which states you'd expect each process to be in and why.

Submission

This assignment does not accept online submissions. Contact your instructor for additional instructions.

Done

Timezone: America/New_York
